

Jquery Stack Banner slideshow with Captions

by Tean.

<http://activeden.net/user/Tean>

Note:

The HTML5 doc-type is not necessary for the component to work on your web page.

Options include:

Use this sexy and stylish banner slideshow to spice up your website.

2 directional movement (stack above or round).

Adjust image size and borders.

Unlimited captions allowed.

Captions can be linked.

Adjust drop shadows.

Adjust slideshow speeds and rotation angles.

Adjust caption opening speeds and delays.

Auto start slideshow.

Cool circle filling preloader included.

How to implement into your website?

You have 2 folders supplied (source and deploy)

Copy deploy folder to your website root.

(you dont need to copy index.html from deploy folder, just open this in text editor and do the described below)

There are 2 sections (one in head tag and one in body tag) that you need to copy into your website. In the head tag you have links to stylesheets and javascript files, and the settings for the component.

```
<!-- ***** START COPY INTO HEAD SECTION ***** -->
...copy everything between these lines in head section...
<!-- ***** END COPY INTO HEAD SECTION ***** -->
```

```
<!-- ***** START COPY INTO BODY SECTION ***** -->
...copy everything between these lines in body section...
<!-- ***** END COPY INTO BODY SECTION ***** -->
```

How to change image size, border size and color?

Find this in stackGallery.css:

imageHolder is the class for the div that holds each image slide.

Currently imageHolder is 520x270px, white background, while images are 500x250px, positioned at 10,10px, which means the border is 10px.

```
5
6 /* div holder for slide images, specify image border here */
7 .imageHolder{
8     position:absolute;
9     width:520px;
10    height:270px;
11    background:#fff;
12
13    -moz-box-shadow:5px 5px 5px #333;
14    -webkit-box-shadow:5px 5px 5px #333;
15    box-shadow:5px 5px 5px #333;
16
17    /* For IE 8 */
18    -ms-filter: "progid:DXImageTransform.Microsoft.Shadow(Strength=3, Direction=135, Color='#333333')";
19    /* For IE 5.5 - 7 */
20    filter: progid:DXImageTransform.Microsoft.Shadow(Strength=3, Direction=135, Color='#333333');
21 }
22
23 /* slide image properties */
24 .imageHolder img{
25     position:relative;
26     width:500px;
27     height:250px;
28     top:10px;
29     left:10px;
30 }
31 }
```

You can also change the drop shadow settings in here.

How to position controls (prev, pause/play, next)?

Find this in stackGallery.css:

SlideControls div holds the 3 inner div controls.

```
/* controls */
#slideControls{
  position:absolute;
  width:35px;
  height:105px;
  top:100px;
  left:590px;
  display:none;
  /*background:green;*/
}

/* previous icon */
#slideControls #slide_prev{
  position:relative;
  width:33px;
  height:33px;
  display:block;
  float:left;

  margin-bottom:2px;
}

/* toggle icon, we use 2 images for both pat
#slideControls #slide_toggle{
  position:relative;
  width:33px;
  height:33px;
  cursor:pointer;
  display:block;
  float:left;

  margin-bottom:2px;
}
```

Controls are currntly located right of the stack since the stack setting from index.html is:

```
/* if true: stack in circle, if false: stack above */
roundStacking: true,
```

This means when 'back' is used, slide comes from below, and thus would cover the controls so it seems natural to put them right of the stack.

You can put them wherever you want obviously.

How to add/remove slides and captions?

Find this in index.html body section:

```

<!-- this div will hold actual slides -->
<div id="sliderHolder"></div>

<!-- playlist holder (hidden). List captions below img, as many as you want (on none).
'class' attribute = x,y position of the caption inside the slide.
'background-color' = background color of the caption.
'color' = text color of the caption. -->
<div id="sliderImages">
  <ul>
    <li></li>
    <li class="20,200" style="background-color: #5D8AA8; color: #ffffff">Cool Preloader Included</li>
  </ul>

  <ul>
    <li></li>
    <li class="20,20" style="background-color: #ffffff; color: #000000">Easy to Customize</li>
    <li class="20,180" style="background-color: #CC9; color: #ffffff">Very Stylish To Have</li>
  </ul>

```

Highlited green is 1 slide (with 1 caption).

List image first, then captions (if any).

Captions are unlimited.

Caption font and background size setting:

```

/* To change font visit http://www.fontsquirrel.com/fontface */
@font-face {
  font-family: 'YanoneKaffeesatzRegular';
  src: url('../data/fonts/YanoneKaffeesatz-Regular-webfont.eot');
  src: url('../data/fonts/YanoneKaffeesatz-Regular-webfont.eot?#iefix') format('embedded-opentype'),
       url('../data/fonts/YanoneKaffeesatz-Regular-webfont.woff') format('woff'),
       url('../data/fonts/YanoneKaffeesatz-Regular-webfont.ttf') format('truetype'),
       url('../data/fonts/YanoneKaffeesatz-Regular-webfont.svg#YanoneKaffeesatzRegular') format('svg');
  font-weight: normal;
  font-style: normal;
}

/* captions, adjust caption padding around text here */
.caption {
  position: absolute;
  padding: 5px 20px 5px 20px;
}

.caption a {
  color: white;
  text-decoration: underline;
}

.caption a:hover, a:active {
  text-decoration: underline;
}

```

sliderWrapper is the div which holds the whole component.

Specify font for captions here:

```
7
8 /* component holder */
9 #sliderWrapper{
10     position: absolute;
11     top: 300px;
12     left: 300px;
13     /*background: #666;*/
14     width: 600px;
15     height: 900px;
16
17     left: 50%;
18     margin-left: -300px;
19
20     font-family: "YanoneKaffeesatzRegular", Geneva, sans-serif;
21     font-size: 30px;
22
23 }
24
```
